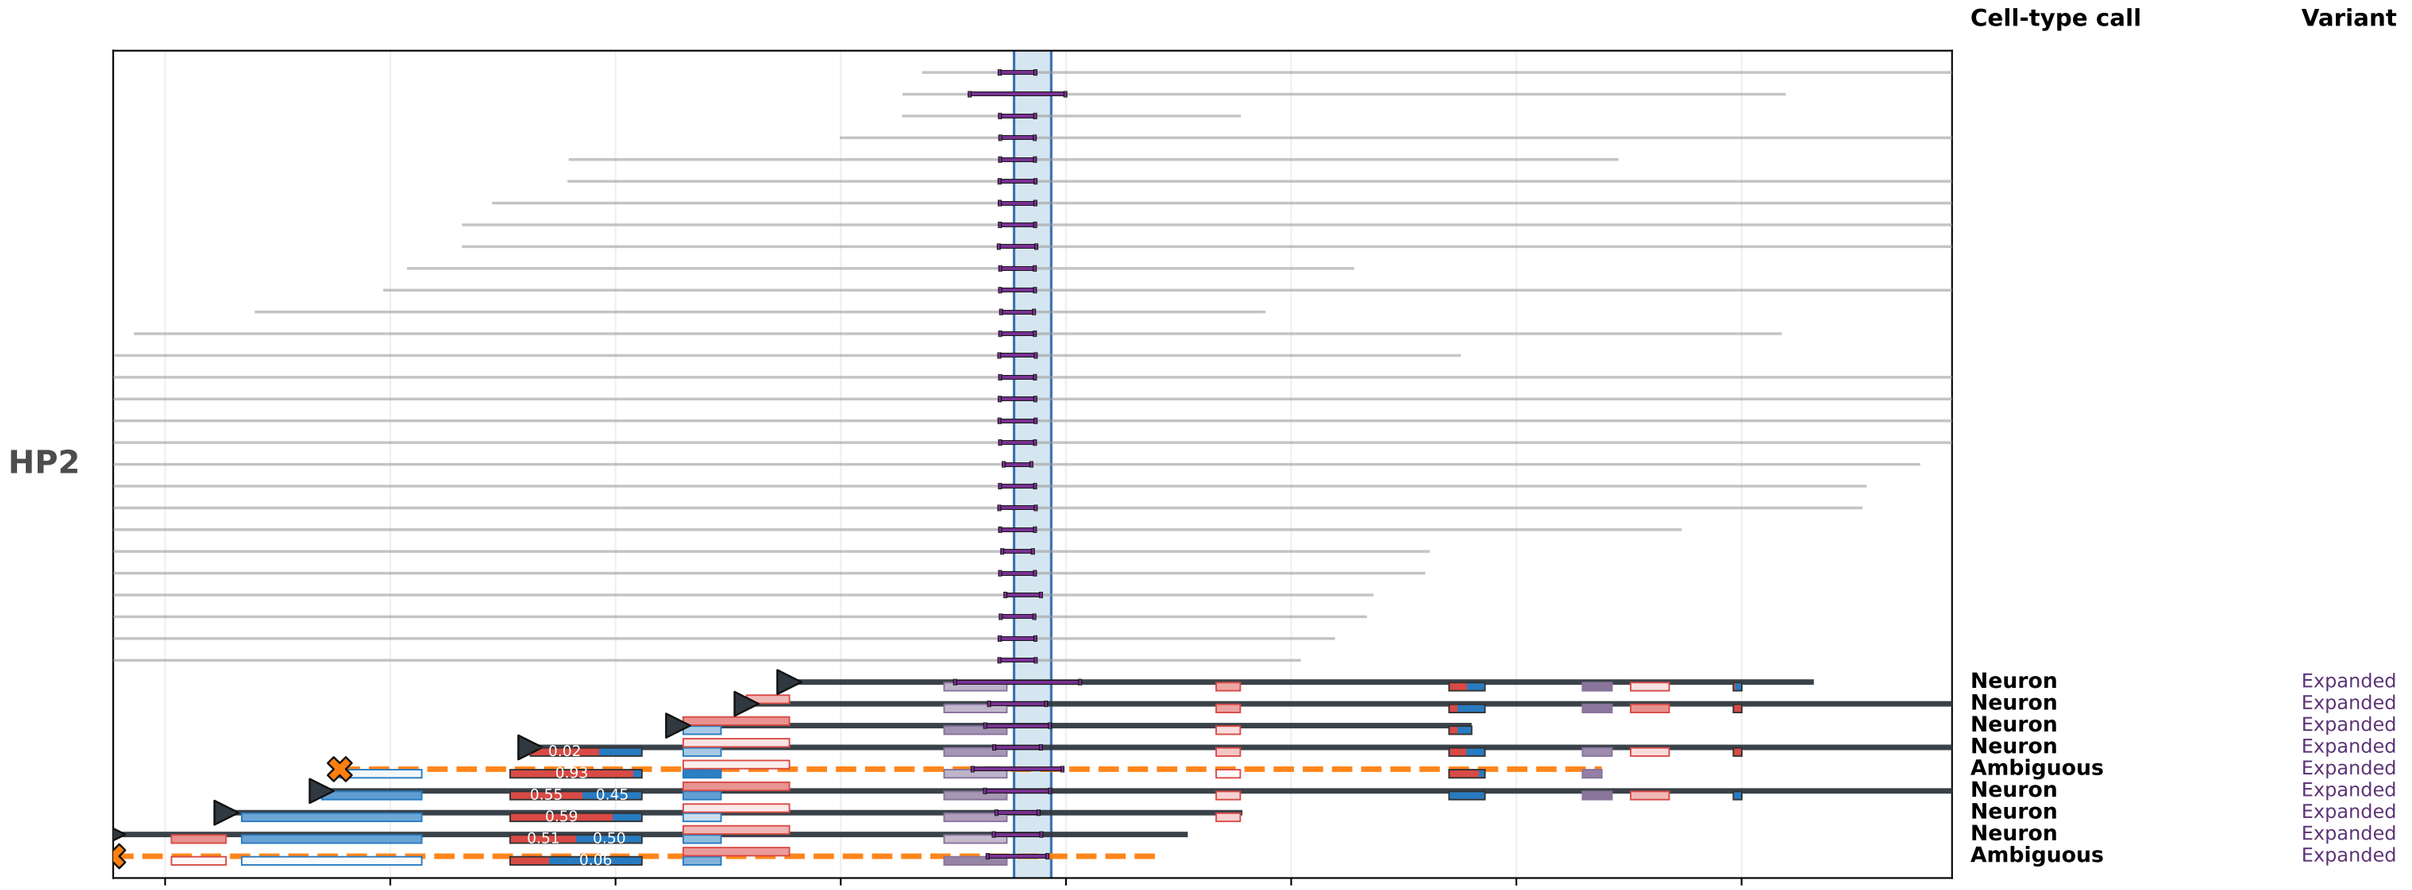
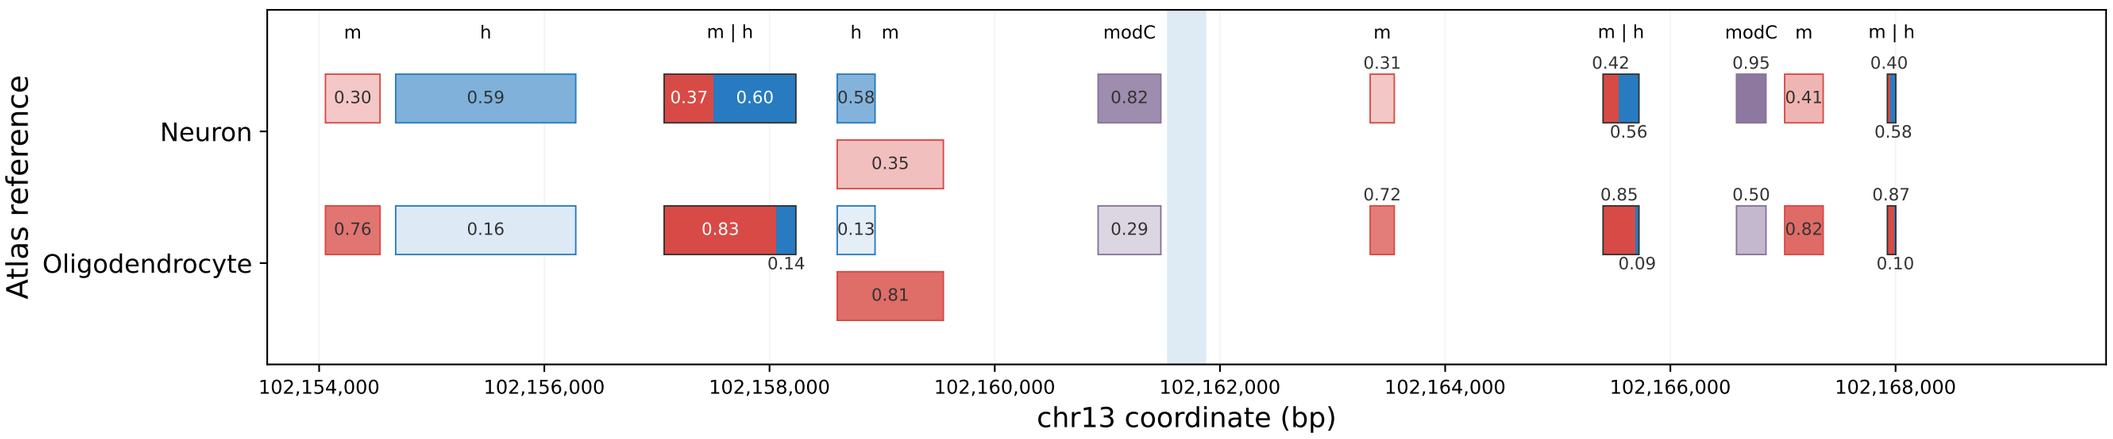
bmsa bulk · FGF14 · TR chr13_102161539_102161869 (expansion_all) at chr13:102161540-102161869

Haplotype: HP2 · 37 reads shown · 9/10 variant-support reads shown

Locus: chr13:102,161,540–102,161,869 · Display-only exclusion: 1 read(s); calls unchanged



11 genomic intervals · 14 assay rows · paired widths = relative 5mC : 5hmC



Paired boxes: red = m/(m+h), blue = h/(m+h); canonical C is excluded from this ratio. Numbers are absolute means.
Single-assay boxes: white-to-color mean. Equal read-box heights; overlapping intervals occupy separate lanes.

Read boxes summarize observed CpGs in ctDMRs; paired means use identical CpGs, without imputation.
Cell-type labels are predictions. CIGAR insertion width is not a direct repeat-length scale.
